### Planner's comments - Matthew Foskett

Thanks to all who attended this event and to all those who volunteered in order to make the event happen. People seemed to really enjoy the courses and it was great that several people went out on multiple courses. Please do come along to future events and club nights if you are keen to try out more orienteering.

This was my first time planning for an event rather than simply for club nights or training - it was really enjoyable, but also involved learning a few things about the rules for the various colour coded courses. Looking at the spread of times in the results it seems that the courses provided a suitable level of challenge. One concern I did have was fitting the Advanced course into the area without it becoming repetitive and from the comments I received it seems that the butterfly loops on this longest course achieved this, which is great.

It was also the first event usage of this map and thanks to Allen for creating it. The vegetation grows super quickly at this time of year and so some map updates were required in the week to accommodate it. Also, whilst I'd tried my best to plan courses which avoided the most overgrown areas, there were still a few comments from the two longer courses regarding the level of vegetation. I know that on some of the maps the rough open and colours for the forest runnability had not printed clearly.

Next NN CATI event:

9.7.22 - Bearpark Colliery Woods

NN also hosts a Club Training event most Wednesday evenings around the Durham area starting at 6:30pm. For further information contact Debby or Julian Warren: [info@northern-navigators.org.uk](mailto:info@northern-navigators.org.uk)
